DISCLAIMER

We will not in any way be responsible for your crops, as there are so many conditions, too numerous to mention, why we can not guarantee a crop to grow and mature. Purity and germination tests are taken carefully, and are mentioned for guidance only.

MARK MEANS COMPANY,
Lewiston, Idaho.

BUY YOUR SEEDS EARLY

You will gain a distinct advantage by arranging early for your seed supply, as orders must be filled carefully.

IMPORTANT

Owing to fluctuations in market prices, it may be necessary to change some of the prices quoted herein during the season. Should prices change and orders are received at prices named, seed will be sent equivalent to the money received figuring the order at current prices.

HOW TO SHIP

Always state how you want heavy seed shipped, by freight, parcel post or express, and if your station is a prepay point, don't forget to add enough money to take care of charges. Should you not receive the goods you ordered within a reasonable time, write us regarding the matter and we will gladly put a tracer after your shipment.

Seed buying is different from the buying of most any other commodity. There are many things to watch, weeds, both annual and noxious, mixed varieties, etc., that take a trained man to detect. But men who have spent twenty or thirty years in the practical study of seed can be depended upon to handle only high grade varieties—tested for purity and germination.

All seeds tested for purity and Germination

TIMOTHY

Timothy is the most valuable of all grasses for hay, and is also fine for mixing with red or alsyke clover for either hay or pasture. Our seed is Idaho grown, recleaned and put in the best condition for seeding.

KENTUCKY BLUE GRASS

Makes the best pasture of any grass. Starts early in the spring, and lasts until late in the fall. Should form part of every pasture mixture. Also used extensively for lawns.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.60	\$5.50	\$25.00	\$50.00
Choice50	4.50	20.00	40.00

CANADIAN BLUE GRASS

Somewhat resembles Kentucky Blue Grass but is shorter and more slender. Thrives on even hard clay soil where there is not enough life for Kentucky Blue Grass. For mixtures it is best to use Red Top or Orchard grass, as it does not thrive when mixed with clovers.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy	\$0.40	\$3.75	\$17.50	\$35.00
Choice35	3.50	15.00	30.00

ITALIAN RYE GRASS

Valuable for pasture or hay; makes a large growth the first year.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.25	\$2.50	\$10.00	\$20.00

MEADOW FESCUE OR ENGLISH BLUE GRASS

Especially fine for permanent pasture; also good for hay. Grows two to three feet high, but not in bunches like Orchard Grass. Succeeds on poor soils and withstands extremely dry weather.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.30	\$2.75	\$12.50	\$25.00

BROMUS INERMIS OR BROME GRASS

Recommended for high, dry lands. Is drought resisting, and furnishes an abundance of high quality hay or pasture.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.30	\$3.00	\$12.50	\$25.00

TALL FESCUE GRASS

Tall Fescue should form a part of all pasture mixtures on wet or clay soils. This grass grows two to four feet tall, forming tufts or bunches.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.55	\$5.00	\$22.50	\$45.00

ORCHARD GRASS

Orchard Grass is equally good for pasture or hay. When mixed with Alfalfa makes a high quality feed, especially fine for horses. Extra good in pasture mixtures on account of its earliness and its ability to withstand drought and close pasturing.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.30	\$3.00	\$12.50	\$25.00
Chice25	2.50	11.50	22.50
Prime23	2.30	10.00	20.00

RED TOP

A valuable grass for moist or even marshy lands. Makes fine feed when mixed with Alsike clover.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
Fancy grade	\$0.40	\$4.00	\$16.00	\$30.00

PASTURE MIXTURE

We recommend the following as a good pasture mixture:

	5 lbs. Blue Grass.
	6 lbs. Orchard Grass.
For one	3 lbs. Rye Grass.
Acre	2 lbs. Alsike or Red Clover.
	2 lbs. Timothy.
	2 lbs. Tall Fescue.

We also have a Timothy and Alsike mixture for burned-over land at \$15.00 per 100 lbs.

Grass and Clover Seed Prices Subject to Change Without Notice

LAWN MIXTURES

For lawns we recommend a mixture of White Clover and Blue Grass, sowing one pound to every 300 square feet.

You must not expect to make a fine lawn with cheap seed. The best lawn grass mixtures cost more at first than the poorer substitutes, but will be found much cheaper and more satisfactory in the end.

No. 1 grade Hulled and Scarfield\$0.30	\$3.00	\$13.00	\$25.00

SUDAN GRASS

This is an annual, and is the best grass for dry-land seeding. Produces a large tonnage of good feed. Should be seeded after all danger of frost is past. A great forage crop, grows 7 to 9 feet.

	1 lb.	10 lbs.	50 lbs.	100 lbs.
No. 1 grade\$0.25	\$2.50	\$12.00	\$22.50

SORGHUMS

Sorghums are used both for fodder and pasture. As a fodder crop they yield a large quantity of high quality feed. As a pasture for sheep or hogs it is unequalled; when grazed down it will quickly start up again, thus affording a large amount of pasture during the summer months. Our seed is Northern Grown selected stock.

WINTER OR HAIRY VETCH

This is a hardy, valuable crop for either forage or fertilizer. Thrives on nearly all soils, and grows four to five feet long. Being a legume it is a great soil builder. Can be sown either in the spring or fall. When it is to be cut for hay, it is best to sow some grain with it to act as a support. It can be cut twice, or used as pasture after the first crop is taken off. Although an annual, it resows itself, and will come up on the same ground for several years.

FIELD PEAS

Peas are a very profitable crop, and will also build up the land by returning the much needed nitrogen to the soil. The clovers alone rank higher than peas in their soil enriching properties. The vines can be used for hay, or the peas threshed and used for feed. Next to corn, peas have a higher feeding value than any other grain. Sow 100 to 180 lbs. per acre. KALE

Kale is a variety of cabbage; the plants attain a height of three to four feet. The stem is covered with leaves which form small heads. It is eaten greedily by sheep. If drilled, should be planted in rows 26 to 30 inches apart, and thinned to 18 inches. Use $\frac{3}{4}$ to 1 pound of seed per acre. If sown broadcast use $1\frac{1}{2}$ pounds to the acre.

Alfalfa, clovers, soybeans, vetches, peas and other legumes should always be inoculated with Nitragin. The lack of necessary bacteria in the soil is often the cause of poor legume crop—a weak stand—or a total failure.

A GREAT PRICE REDUCTION

Nitragin now comes in bushel sizes instead of acre sizes. This means it costs you less per acre than inferior imitations.

Your Dollar Goes Further With NITRAGIN

Nitragin is an old, reliable inoculator. At the low price of 20 to 33 cents per acre you cannot afford to sow legumes without it. Nitragin is put up in the modern ventilated package; in a rich, soil-like packing medium. The contents are always fresh, living bacteria to feed your plants. Easy to use.

Soy Beans

These do well even on poor soils. They are extensively grown in the corn belt. Sow the seed any time after danger of frost has passed—about the time corn is planted. Plant 2 inches deep. If intended for hay, the crop should be cut any time from the setting of the seed until the leaves begin to turn yellow. Soy Beans are often planted with corn or sorghum for silage. If planted in rows 2 to 3 feet apart, 20 to 30 pounds are needed per acre. For broadcasting use 60 to 90 pounds per acre.

EARLY BLACK

This is northern grown seed and one of the earliest varieties. Especially adapted to this district.

Price.....1 lb., 15c; 25 lbs., \$3.50; 50 lbs., \$7.00; 100 lbs., \$12.50

Cabbage

EARLY JERSEY WAKEFIELD

The favorite Early Cabbage with our market gardeners. A sure header. The thick, stout leaves and compact habit make it the best for Wintering over and very early setting.

Grown more extensively for market than any other early cabbage. Is always of good size, very solid, leaves; a reliable header and always gives good satisfaction.

Price.....Pkg., 5c; oz., 20c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., \$1.00; 1 lb., \$2.00

NEW YORK OR WONDERFUL

A new and very popular variety, thriving in all sections and during all seasons. A crisp, cabbage-heading lettuce, extremely large, sometimes fifteen inches in diameter and weighing two or three pounds. It is deep rooting, stands heat well, is slow to run to seed, and especially adapted for growing during the summer months. It is a sure header under the most trying conditions. The interior is beautifully blanched, creamy white, crisp, tender and delicious. Especially recommended as a standard, main crop, hot-weather lettuce. Very popular with market gardeners, and is equally good for home use. Not recommended for forcing. As we usually have a heavy demand for this variety we recommend early ordering. This is the variety planted extensively in the Lewiston Orchards and shipped in carloads all over the United States.

Price.....Pkg., 5c; oz., 25c; ¼ lb., 80c; ½ lb., \$1.50; 1 lb., \$3.00

PRIZEHEAD

A large clustering, non-heading lettuce, easy to grow and an excellent variety for the home garden, but not recommended for market, as it is too tender to stand shipping and handling. The leaves are bright green tinged with red; crisp, tender and sweet.

SEED TREATMENT

Dipping in a solution of Bi-Chloride of Mercury (Corrosive Sublimate) which is prepared as follows:

Bi-Chloride of Mercury (Corrosive Sublimate)4 ounces

Water30 gallons

Soak the potatoes in this solution from 1½ to 2 hours and dry before planting.

SPECIAL NOTE—In dissolving the corrosive sublimate use a small amount of hot water, about a gallon to the ounce, adding it to the cold water when it is dissolved as it will be impossible to get good results by attempting to mix the entire amount in cold water.

WARNING—The poisonous nature and corrosive action of this solution makes it necessary to use care in handling and keep the potatoes from stock or poultry. Any that are not used should be burned or buried. Make the solution in a wooden or porcelain container as it will corrode metals and rapidly lose its strength.

GREENING

After dipping, the seed should go through the process of greening, leaving them spread in the light and warmth where the light will cause them to assume a greenish color and sprouting will begin. Sprouts brought on in this way will be short and thick and the potato will awaken from its dormant condition and develop much more vigor and vitality than potatoes that are not so treated. The greening also is a big factor in eliminating fungus growth and diseases. Another very valuable result from greening is the time gained as the potatoes thus treated will germinate and develop very much earlier than they would otherwise.

It Pays to Use Fertilizers

Fertilizers

COMMERCIAL FERTILIZERS

The use of commercial fertilizers is now so common that it is not the question of whether to use them or not, but rather which one to use. We carry Swift's "Red Steer" Brand in several formulas, each giving best results for different crops.

Name	Analysis	Use	Price	
			100 lbs.	Ton
Orchard Dressing	13— 4½—0	Orchards	\$4.75	\$90.00
Red Steer C	3—10 —4	Truck	3.75	70.00
Red Steer D	4— 7 —6	Truck Lettuce	3.75	70.00
Lettuce Special	3—10 —7	Lettuce	3.75	70.00

The analysis is designated by three figures, always written in the same order with a dash between. The first figure denotes the percentage of nitrogen as ammonia. The second figure denotes the percentage of available phosphoric acid. The third figure denotes the percentage of potash.

CHEMICAL FERTILIZERS

Sulphate of Ammonia

Analysis—Nitrogen as Ammonia 25%.

Sulphate of Ammonia is one of the most quickly available and most desirable forms of Nitrogen to use. It is at once absorbed by the water in the soil and is immediately effective. Use 2 to 3 pounds to fertilize 1,000 square feet of lawn or 400 to 600 lbs., per acre.

Price, per 100 lbs.\$5.50

Nitrate of Soda

Analysis—Nitrogen as Ammonia 18½%.

One of the most valuable fertilizers where quick leaf growth is desired. Used extensively for fruit trees, lettuce, radishes, celery and other quick growing crops.

Price, per 100 lbs.\$4.50

Land Plaster or Gypsum

Land plaster is not a fertilizer, as it contains no plant food. But it causes a chemical change in the soil, releasing that which is already there in an unavailable form. It is very beneficial to clovers, alfalfa, peas, beans and other legumes because of the sulphate it contains. Packed in 100 lb. bags.

Price.....Bags, \$1.00; per ton, \$18.00

ANIMAL FERTILIZERS

Bone Meal

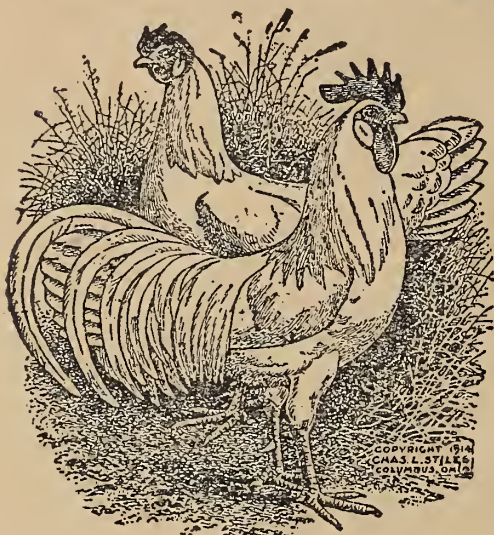

Analysis—Nitrogen 2½%, Phosphoric Acid 18%

Bone Meal is one of the best fertilizers to use where Nitrogen and Phosphoric Acid are needed. It is especially good for lawns and flower beds. It is slow in action and there is no waste, as the plant food is released only as fast as it can be taken up by the plants. It can be used in almost unlimited quantities without danger of burning the plants.

WHEN AND HOW TO ORDER

Advance Orders

Orders should be booked in advance as early as possible to insure delivery on the dates desired. Send one-fourth of the amount with order, balance to be paid not later than one day before date of shipment.

Guarantee on Eggs and Chicks

Hatching eggs are carefully packed in either baskets or cartons and can be safely shipped by either Express or Parcel Post. When ordering by Parcel Post be sure to include the postage and if you send too much, will return the balance. We guarantee at least 85 per cent fertility of the eggs shipped and if less than this will replace free of charge. Eggs should be tested at least within seven days after they have been set and report the number of infertile eggs at once. Eggs should be incubated at once as we cannot be responsible for results if you hold them any great length of time. Report of the infertile eggs should be received within 14 days from date of shipment if you wish any replacement.

On Baby Chicks we guarantee delivery of full number of live chicks paid for. CHICKS MUST BE EXAMINED IN THE PRESENCE OF THE EXPRESS AGENT as soon as possible after arrival. If any are dead have him state this on express receipt and the condition the chicks were received. Send us the express receipt and we will replace any that are dead.

We ship only fine, large, healthy chicks, and it seldom happens that any are dead unless it has been through the neglect or carelessness of the express company, and this seldom happens.

Information

Tree Tanglefoot is a sticky compound similar to that used in making Fly Paper. It is easily applied and is the most effective and economical protection for fruit, shade and ornamental trees against **all crawling insects**. Particularly recommended against **Canker Worms, Climbing Cut Worms, Ants, Tussock Moths, Brown-tail Moths, Gypsy Moths**.

On matured fruit trees and all shade trees it is applied directly to tree trunks; on young fruit trees over strips of manila paper.

TANGLEFOOT ANT AND ROACH POWDER**How It Works**

Particles of the powder cling to their feet and feelers. They carry it to their nests and pass it on to other members of the colony through contact. It is a habit of Roaches and Ants to clean their feet and feelers frequently through their mouths. In this way the powder reaches their stomachs and they die within a few hours.

DANDELION, GARDEN OR LAWN RAKE

The All Purpose Rake is unequalled for removing yellow dandelions. When it is pulled across the lawn, the stems, leaves and blossoms are wedged between its teeth and easily pulled out. It is also a first-class rake for general work. It will pick up the acorns, pebbles, small twigs, etc., which an ordinary rake will not touch, and will clean the lawn of cut grass and dead leaves in better shape than is possible by any other means. It is self-cleaning. A single backward stroke clears the rake—no pawing over the debris with your fingers. It is light and easy to handle, has great capacity, and is strong enough for the roughest use.
